

Total Laparoscopic Hysterectomy: Slide Atlas

Hysterectomy is the core gynaecological operation, and one of the most frequently performed of all major surgical procedures. Thus, laparoscopic hysterectomy has generated a great deal of interest and controversy over the last five years, and any advance in technique is of interest to every gynaecologist. Laparoscopic hysterectomy offers a number of benefits - reduced pain and scarring, shorter hospital stay, lower cost - but is technically complex. This atlas consists of a set of 30 slides, both clinical and photographs and diagrams, illustrating total laparoscopic hysterectomy.
