# Master of the Asteroid

The Selenite was one of the first space vessels the fate of its astronauts and the mysterious asteroid they landed on was a strange tale...excerptMans conquest of the interplanetary gulfs has been fraught with many tragedies. Vessel after vessel, like venturous motes, disappeared in the infinite and had not returned. Inevitably, for the most part, the lost explorers have left no record of their fate. Their ships have flared as unknown meteors through the atmosphere of the further planets, to fall like shapeless metal cinders on a never-visited terrain; or have become the dead, frozen satellites of other worlds or moons. A few, perhaps, among the unreturning fliers, have succeeded in landing somewhere, and their crews have perished immediately, or survived for a little while amid the inconceivably hostile environment of a cosmos not designed for men.In later years, with the progress of exploration, more than one of the early derelicts has been descried, following a solitary orbit; and the wrecks of others have been found on ultraterrene shores. Occasionally not often it has been possible to reconstruct the details of the lone, remote disaster. Sometimes, in a fused and twisted hull, a log or record has been preserved intact. Among others, there is the case of the Selenite, the first known rocket ship to dare the zone of the asteroids.At the time of its disappearance, fifty years ago, in 1980, a dozen voyages had been made to Mars, and a rocket base had been established in Syrtis Major, with a small permanent colony of terrestrials, all of whom were trained scientists as well as men of uncommon hardihood and physical stamina.The effects of the Martian climate, and the utter alienation from familiar conditions, as might have been expected, were extremely trying and even disastrous. There was an unremitting struggle with deadly or pestiferous bacteria new to science, a perpetual assailment by

dangerous radiations of soil, and air and sun. The lessened gravity played its part also, in contributing to curious and profound disturbances of metabolism.

asteroids/ at master hscells/asteroids GitHub   Asteroid 2013 UG1 was discovered by Russian astronomers using MASTER network telescope, located in Buryatia, Siberia.
