

Ecology and Management of the Atitlan Grebe, Lake Atitlan, Guatemala (Wildlife Monographs, No. 37)

One of the rarest birds in Central or North America is the Atitlan, or giant pied-billed grebe, known to occur only at lake Atitlan in the Guatemalan highlands. There are very few published reports about this wary grebe. Both scientific curiosity and a deep concern over the declining status of this unique population, prompted the author to investigate the species. One objective was to study grebe biology, ethology, population dynamics, status as a full species, and reported flightlessness. Another goal was to gather data on the ecology of Lake Atitlan.
