

# ESCORT 3: Linking Non-Target Arthropod Testing and Risk Assessment with Protection Goals

The result of the third European Standard Characteristics Of beneficials Regulatory Testing (ESCORT 3) workshop, this book addresses questions about protecting non-target arthropods in the agricultural use of plant protection products. Nearly 60 scientists attended the workshop, representing a cross-section of regulatory authorities, academia, and the private sector, and focusing on four key topics: Level of protection and testing scheme Off-crop environment Recovery Field studies The workshop deliberations produced a cogent series of conclusions and recommendations that build on the outputs from the first two ESCORTs: Recommendations for regulation, including protection goals and risk assessment Recommendations for research, including differences in sensitivity between in-crop and off-crop communities Recommendations for education, including for those who conduct, monitor, and evaluate field studies, as well as risk and conservation management advice for farmers. This book is one of many SETAC publications that offer timely, innovative, and critically reviewed perspectives on current topics relating to broad environmental toxicology and chemistry issues.
