

# Fibrin Sealing in Surgical and Nonsurgical Fields: Volume 4 Orthopedic Surgery Maxillofacial Surgery (v. 4)

In the field of orthopedic surgery, additional areas of application and new indications have been discovered for fibrin glue treatment, for example, hemostasis in pseudotumors in hemophilic patients or in torn ligaments, and in spongiosa transplantation, primarily when nonautologous bone material is being used, or to fill large defects. In maxillofacial surgery fibrin glue is mainly used for osseous contouring of the facial and frontal bones, for alveolar ridge augmentations in preprosthetic surgery, and for soft tissue reconstructions.

**Use of Fibrin Glue in Maxillofacial Surgery** Oral and maxillofacial surgery (OMS or OMFS) specializes in treating many diseases, injuries Oral and maxillofacial surgery is widely recognized as one of the specialties of dentistry. All oral and maxillofacial surgeons however must obtain a university degree in dentistry before beginning residency . 8 (4): 3034. **Fibrin sealant, aprotinin, and immune response in children** Fibrin Sealing in Surgical and Nonsurgical Fields Whereas after 4 and 8 weeks grafts demonstrated a perichondrium-like structure, after 12 Engkvist O, Skoog V, Pastacaldi P, Yormuk E, Juhlin R (1979) The cartilaginous potential of the .
