

## Cold: Adventures in the Worlds Frozen Places

From avalanches to glaciers, from seals to snowflakes, and from Shackletons expedition to The Year Without Summer, Bill Streever journeys through history, myth, geography, and ecology in a year-long search for cold--real, icy, 40-below cold. In July he finds it while taking a dip in a 35-degree Arctic swimming hole; in September while excavating our planets ancient and not so ancient ice ages; and in October while exploring hibernation habits in animals, from humans to wood frogs to bears. A scientist whose passion for cold runs red hot, Streever is a wondrous guide: he conjures woolly mammoth carcasses and the ice-age Clovis tribe from melting glaciers, and he evokes blizzards so wild readers may freeze--limb by vicarious limb.
