

The Collected Papers of Albert Einstein, Volume 4: The Swiss Years: Writings, 1912-1914

This volume presents Einsteins writings from the final period of his work in Switzerland. Most of the material in Volume 4 documents Einsteins search for a relativistic theory of gravitation, a search that ended in Berlin in the fall of 1915 with the completion of the general theory of relativity. Three scientific manuscripts, printed here for the first time, provide insight into Einsteins efforts to generalize his original relativity theory into a theory of gravitation. The first is a review article on the special theory of relativity. The second consists of notes that document Einsteins research on gravitation. The third manuscript contains calculations on the problem of the motion of the perihelion of Mercury. The explanation of the observed anomaly of this motion was to become one of the classical tests of general relativity. The existence of such a manuscript has not been known before now. All three of these manuscripts, along with other material in this volume, add significantly to our understanding of the creation of general relativity. This supplementary paperback volue presents only the English translations of non-English materials and is not intended for use without the original-language documentary edition.
