

Dsm-Iv(r) Sourcebook, Volume 1 (Dsm-IV Sourcebook)

For over six years the DSM-IV Task Force and members of the DSM-IV Work Groups have participated in a comprehensive effort of empirical review leading to the publication of the fourth edition of the American Psychiatric Association's Diagnostic and Statistical Manual of Mental Disorders (DSM-IV). This first volume of the DSM-IV Sourcebook chronicles these efforts and their results, documenting the rationale and empirical support for the text and criteria sets presented in DSM-IV. From a total of five volumes, the first three contain the DSM-IV literature reviews and summarize the DSM-IV Work Group efforts that led to the publication of the DSM-IV Options Book. This, the first volume, presents the reviews for substance use disorders; delirium, dementia, and amnesic and other cognitive disorders; psychotic disorders; medication-induced movement disorders; and sleep disorders. Each review contains the following six sections:

- Statement of the issue explicitly outlines the issues addressed in the review.
- Significance of the issue frames the importance of each issue and discusses its clinical and empirical significance.
- Method documents the extent to which the reviews were systematic and comprehensive in their coverage of the literature.
- Results provides an objective and thorough summary of the findings most relevant to each issue.
- Discussion addresses the implications of the clinical research findings for DSM-IV.
- Recommendations are recommendations for DSM-IV based on the review of the literature.
