

Random Origins: Four Our Cyber World Stories (Volume 7)

Find out how Our Cyber World got its random Enter a world where secret government projects employ sometimes reluctant hackers to secure key national Cyber infrastructure, co-opting drones and microwave ovens to do clever things along the way. In this world you will meet Julian Rogers before he washed out of said projects, and you will come face to face with artificial intelligence technologies whose creators will soon not control. Together with Feral, my upcoming novel, the stories in Random Origins precede DEAD BEEF (Our Cyber World, book 1) and give insight into what happens in that full length novel. Come in and join a world of hacking while speeding along highways inside a semi trailer, of networked kamikaze drones, and a few other less than perfected tricks our protagonists tinker with. This collection includes four long short stories: Semi, Cyber Radio, DroNET, and Kings Sacrifice. What are these about? Semi: Julian Rogers thought he went there for another hack. Sure, his contact told him to meet at a Las Vegas truck stop. But Julian needed the money to keep his Las Vegas gambling spree rolling. Instead, he will find himself barreling down the highway inside a semi-trailer, doing the hack of his life. Julian likes to keep it random and keep it real, but this ride may prove too random, even for him. Cyber Radio: When Julian shows off how to control a microwave oven without touching it, everyone thinks its all in good fun and enjoys the popcorn he cooks. But what if the prank-hack holds the key to breaching air-gapped computer networks? What if that possibility brings out operatives who will do anything to get their hands on this Cyber technology? DroNET: Julian Rogers had a great idea: network a bunch of drones, and use them to deliver a Cyber payload. But the concept went nowhere for lack of Federal funding. When terrorists unleash coordinated drone attacks on the
