**Comets NASA** On July 23, 1995, an unusually large and bright comet was seen outside of Jupiters orbit by Alan Hale of New Mexico and Thomas Bopp of Arizona. Careful **Comet - Wikipedia** A comet is a very small solar system body made mostly of ices mixed with smaller amounts of dust and rock. Most comets are no larger than a few kilometres

**Comets - BrainPOP** Comets are big chunks of ice, rock and gas. They are dirty snowballs of leftovers from the beginning of our solar system. Comets get their name from the Greek **Comets - Basic Facts Planets - NASA Solar System Exploration** In 1997, comet Hale-Bopp was the second great comet to visit the inner Solar System in 2 years.

The two tails and coma are clearly visible, and the existence of **Comet Introduction - Solar Views** In the distant past, people were both awed and alarmed by comets, perceiving them as long-haired stars that appeared in the sky unannounced and **Comet NASA** Tried the activities? Tell us what you think! If you are a teacher, please fill out the teacher evaluation ! **Images for Comets** List of the current bright comets visible in the sky, detailed information updated in real time, online sky maps. **Comets facts, pictures and information** What are comets? A comet is a small world which scientists sometimes call a planetesimal. They are made out of dust and ice, kind of like a dirty snow ball.

**Comets Facts and Information on Visible Comets - Sky & Telescope** In this educational animated movie about Science learn about meteors, Halley. **Comets - The Sky Live** Unlike the other small bodies in the solar system, comets have been known since antiquity. There are Chinese records of Comet Halley going back to at least **de Havilland Comet - Wikipedia** Scientists believe that comets are made up of material left over from when the Sun and the planets were formed. They think that about 100,000 million comets **Comet Halleys 2 meteor showers Astronomy Essentials EarthSky StarChild: Comets** Comet 2016 WF9 will approach Earths orbit on Feb. 25, 2017. At a distance of nearly

32 million miles (51 million kilometers) from Earth, this Not long ago, many people thought that comets were a sign that something bad was about to happen to them. People didnt understand how **Comet COSMOS** Its because comets like Halley are so crumbly that we see annual meteor showers. One shower spawned by this comet is going on now.

**Comets - Astronomy For Kids** - The de Havilland DH 106 Comet was the worlds first commercial jetliner. Developed and manufactured by de Havilland at its Hatfield Aerodrome, Hertfordshire, **Comets - In Depth Planets - NASA Solar System Exploration** When is a comet not a comet? When its an asteroid! Find out at a glance what makes these related space travelers different. Resource Overview. Q&A icon Q&A. **News for Comets Comet HaleBopp - Wikipedia** Comets are small, fragile, irregularly shaped bodies composed of a mixture of non-volatile grains and frozen gases. They have highly elliptical orbits that bring **Comet Hale-Bopp Home Page (JPL) - NASA** Comets are cosmic snowballs of frozen gases, rock and dust roughly the size of a small town. When a comets orbit brings it close to the sun, it heats up and **Comets - Windows to the Universe** NSSDCA Photo Gallery: Comets - A collection of images of comets.

**AmazingSpace - All resources on Comets and asteroids** **Comets: Facts About The Dirty Snowballs of Space - Comet HaleBopp** is a comet that was perhaps the most widely observed of the 20th century, and one of the brightest seen for many decades. HaleBopp was **NSSDCA Photo Gallery: Comets - NASA/NSSDC Famous Comets! - Amazing Space, STScI** A comet is an icy small Solar System body that, when passing close to the Sun, warms and begins to release gasses, a process called outgassing. This produces a visible atmosphere or coma, and sometimes also a tail. **Weekly Information about Bright Comets (2017 May 6: North)** 4 days ago Now it is 8.1 mag (May 4, Seiichi Yoshida). It was expected to brighten up to 6-7 mag from April to July. But it is fainter than predicted recently.

**StarChild: Comets - NASA** On July 23, 1995, an unusually bright comet outside of Jupiters orbit (7.15 AU!) was discovered independently by Alan Hale, New Mexico and Thomas Bopp, **none** Halleys Comet or Comet Halley, officially designated 1P/Halley, is a short-period comet visible from Earth every 7576 years. Halley is the only known
