

Gregor Mendel: Planting the Seeds of Genetics

Considered one of the greatest scientists in history, Gregor Mendel was the first person to map the characteristics of a living things successive generations, thus forming the foundation of modern genetic science. In Gregor Mendel, distinguished novelist and biologist Simon Mawer outlines Mendels groundbreaking research and traces his intellectual legacy from his discoveries in the mid-19th century to the present. In an engaging narrative enhanced by beautiful illustrations, Mawer details Mendels life and work, from his experimentation with garden peas through his subsequent findings about heredity and genetic traits. Mawer also highlights the scientific work built on Mendels breakthroughs, including the discovery of the DNA molecule by scientists Watson and Crick in the 1950s, the completion of the Human Genome Project in 2003, and the advances in genetics that continue today.
