

Progress in Ape Research

Progress in Ape Research presents the papers reported in the conference organized by the staff of Yerkes Primate Research Center in celebrating the centenary of Dr. Robert Mearns Yerkes birth, who gave significant contributions to ape research. This book is divided into four sections representing the sessions of the conference. First, the historical beginnings of research on great apes are presented. The other three sections deal mainly with the ongoing studies at the Yerkes Primate Research Center, particularly, in the field of communication and language in great apes, utilization of chimpanzees as biomedical models, and the comparative perspectives of human origins. Presentations by outstanding scientists from other institutions are also shown. The conference is arranged to honor the memory of Dr. Robert Mearns Yerkes, to inspire, and to emphasize some of the areas in psychobiological and medical sciences to which research on great apes is making a contribution.
