

Next of Kin: What Chimpanzees Have Taught Me About Who We Are [ILLUSTRATED]

From Library Journal: In the early 1970s, Allen and Beatrix Gardner performed groundbreaking research in language by teaching American sign language (ASL) to a young female chimpanzee named Washoe. Hired to work with Washoe on this project was a budding psychologist named Roger Fouts. In this work, Fouts (psychology, Central Washington Univ.), codirector of the Chimpanzee and Human Communication Institute, unfolds a fascinating account of how Washoe and four other chimps learned to communicate with humans and with one another via ASL, shattering the concept put forth by Herbert S. Terrace in *Nim* (1979) that language was a defining barrier between humans and other animals. Fouts also breaks another barrier, declaring love for his research subjects, considering the chimps as his extended family. His actions to improve life for his chimpanzees, he notes, and promote humane treatment of all apes in captivity have adversely affected his professional career. Recommended for academic and public libraries. Raymond Hamel, Wisconsin Regional Primate Research Ctr. Lib., Madison Copyright 1997 Reed Business Information, Inc.
