

Signaling Pathways in Liver Diseases

Signaling Pathways in Liver Diseases, 2nd edition focuses on signaling pathways which are particularly important in liver diseases. Recent progress brought hepatology to new frontiers. The increasing frequency of surgery on steatotic and cirrhotic liver obliges liver surgeons and hepatologists to understand the molecular mechanisms at play in these situations and how they can be influenced. Better comprehension of the cellular mechanisms participating in liver regeneration, hepato-cellular apoptosis and ischemia/reperfusion inquiry is mirrored by a dramatic increase in complexity. The number and scope of publications is intimidating and difficult for busy individuals to extract a coherent framework. This book will serve as a source of information facilitating the reading of the literature and the planning of trials. Translational medicine implies knowledge of the molecular targets for novel therapeutic strategies. It will furthermore stimulate more research and lead to better exchange between the laboratory, the clinical ward and the operation room.

Signaling Pathways in Liver Diseases C. Trautwein Springer Dec 29, 2015 Thus, the role of EGFR in liver diseases appears to be more complex than what The main activated downstream signaling pathways are the **Immune cell communication in liver disease and liver regeneration** Aug 28, 2015 Signaling Pathways in Liver Diseases. Additional Information(Show All). How to CiteEditor InformationAuthor InformationPublication Oct 30, 2009 This review will summarize established basic concepts of KC function as well as their role in the pathogenesis of various liver diseases. Due to **Signaling Pathways in Liver Diseases Kupffer Cells - Springer** Aug 28, 2015 Signaling Pathways in Liver Diseases. Additional Information(Show All).
