

## Basic Psychotherapeutics: A Programmed Text

This book provides instruction in applying basic treatment strategies to patient care. Emphasis is placed on teaching diagnostic skills, and especially, the therapeutic management of emotionally disturbed patients. This book is intended as a companion text to *Basic Psychopathology: A Programmed Text*, which focuses more on teaching the description and observational skills for diagnosing common psychopathologic syndromes. *Basic Psychotherapeutics* gives pragmatic suggestions for treating a variety of psychopathologic disorders, many of which are newly classified in the *Diagnostic Statistical Manual - III (DSM-III)* published by The American Psychiatric Association. We have adopted the terminology and many, but not all, of the diagnostic criteria used in DSM-III. The treatment recommendations proposed are eclectic in nature and the information presented is non-theoretical and patient centered. *Basic Psychotherapeutics* is divided into three parts. The first reviews basic data collection procedures and treatment skills; it includes chapters on interviewing, the mental status examination and pharmacologic, psychologic and behavioral therapy. The next section includes chapters on commonly encountered psychiatric syndromes such as schizophrenic, affective and anxiety disorders. The final chapters are presentations of special clinical interest, such as the management of suicidal patients, psychiatric emergencies, treating the dying patient and his family, and others.
