

Teaching Dementia Care

Dementia afflicts millions of Americans and deeply affects the lives of their loved ones. Good care has been proven to have a significant effect on the quality of life of a person with dementia. To ensure good care, staff members of nursing homes, assisted living facilities, and adult day-care centers, and providers of home care must be thoroughly and continually trained by qualified and well-prepared professionals. Nancy L. Mace, coauthor of *The 36-Hour Day*, has created the ultimate teachers guide for dementia care training. Rich with information and with tools for effective communication between teacher and student, the text supplies instructors with in-depth lessons and includes relevant charts, tables, and handouts, which may be customized to suit specific programs. Good training is the foundation for a confident and competent caregiver and supports the dignity and well-being of persons with dementia and their families. With her unmistakable compassion, humor, and wisdom, Mace has provided a much-needed guidebook for better teaching and better care.
