

The Cerebral Symphony: Seashore Reflections on the Structure of Consciousness

It is impossible to conceptualize the power of a symphony just from knowing the technical specifications of each instrument of the orchestra, just as it is impossible to imagine a ballet from knowing how nerves and muscles work. Many people use such an analogy when contemplating the anatomy and physiology of the human cerebral cortex that many of the uses made of this machinery are far removed from the nuts and bolts of neurons. But I think we can do much better than merely wave our hands about the machinery, as is the common practice among psychologists and humanists. I believe that we now understand how our brain creates the narrator of our conscious experience, the conductor of that cerebral symphony not in all its complexity, but at least in principle and that knowledge of the narrator machinery is going to revolutionize our concept of consciousness, make it much easier to appreciate the richness of our cerebral symphonies.

The Cerebral Symphony: Seashore Reflections on the Structure of William H. Calvin, Ph.D. (born April 30, 1939) is an American theoretical neurophysiologist and (Our long train of connected thoughts is why our consciousness is so different from what came before.)
