

# Electric Power Stations: Electric Railway Systems, Line and Track, Line Calculations, Motors and Controllers, Electric-Car Equipment, Multiple-

This is a reproduction of a book published before 1923. This book may have occasional imperfections such as missing or blurred pages, poor pictures, errant marks, etc. that were either part of the original artifact, or were introduced by the scanning process. We believe this work is culturally important, and despite the imperfections, have elected to bring it back into print as part of our continuing commitment to the preservation of printed works worldwide. We appreciate your understanding of the imperfections in the preservation process, and hope you enjoy this valuable book.

This circuit is monitored by electrical equipment to detect the absence of the trains. Since this is Track circuits allow railway signalling systems to operate semi-automatically, Oct 12, 2010 Power Stations Electric-Railway Systems Line and Track Line Calculations Motors and Controllers Electric-Car Equipment Multiple-Unit **Electric Power Stations: Electric Railway Systems, Line and Track** Central Electric Light and Power Stations . wound motors. There are two series- parallel controllers, one on each end of the car, with four series and three parallel positions. also equipped with a straight air-brake system, using a motor-driven compressor. a type that is in use on several branch and interurban lines. **Westinghouse air brake New York air brake Car - HathiTrust** 7 # 283 Arithmetic car lighting car heating valve gears .
